AI APPLICATION / AI SOFTWARE ENGINEER

Summary

Full-stack engineer with production experience on RankOTest, a multi-portal assessment and hiring platform built with TypeScript, React, Node.js, MongoDB, and Redis. Builds reliable AI-powered workflows, including LLM pipelines and agentic tooling, with an emphasis on automated validation, system reliability, and maintainable architecture.

Experience

TalentXminds – RankOTest | rankotest.com Jan 2026 – Present
Full Stack Engineer (full-time from Jun 2026; Intern Jan–Jun 2026) *Remote*

- Core developer on **RankOTest**, a multi-portal assessment and hiring platform (TypeScript, React, Node.js, Express.js, MongoDB, Redis) across 5 portals (Admin, Vendor, Institute, Teacher, Student) and 6 user roles, working directly with the co-founder.
- Shipped **40+ releases**, including **proctoring**, **coding questions with isolated code execution (Piston)**, **re-grade protection**, **college matching**, a **starter-code editor**, and platform capacity fixes.
- Support the **Litmus public hiring drive**, where students take tests in colleges, and the job portal, with **100+ jobs posted** and **400+ trainers registered**.
- Implemented Redis-backed services, rate limiting, authentication, RBAC, and asynchronous workflows across interconnected product modules.
- Apply **AI-assisted and agentic workflows** (Claude Code, MCP tooling) to planning, code review, refactoring, and cross-service impact analysis, using a code knowledge graph and compact context to keep model usage efficient, and validating AI-generated changes with automated tests and human review.
- Ship releases to live servers on **Docker and AWS EC2**, turn business requirements into technical plans, and debug and stabilize production issues.

Vidrohi Awaz | vidrohiawaz.com Dec 2024 – Jul 2025; 2026
Full Stack Developer (Freelance) *Bengaluru, India*

- Develop a production news website end to end, delivering features, bug fixes, and performance improvements for the client.
- In 2026: shipped new features, faster pages, a redesigned interface, and a rebuilt backend; deploy releases to a live server on **Docker and AWS EC2**.

Projects

AI Software Engineering Workflow | TypeScript, Claude API, CLI, GitHub Actions [GitHub] 2026

- Built a CLI that takes a coding task through planning, implementation, testing, review, and fixing, with structured model output and human-reviewable plans.
- Designed a provider abstraction with an offline fixture mode, so the full workflow and CI run with no API key; added token/cost tracking and unit tests.

Personal Assistant Agent (prototype) | Python, LangGraph, Groq 2026

- Built a LangGraph flow that classifies messages as notes, tasks, or questions, files them, and answers from stored notes, with a keyword fallback when no model is available.

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, SQL
Frontend: React.js, React Native, Expo, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Express.js, REST APIs, JWT, Authentication, RBAC, Rate Limiting
Databases & Infrastructure: MongoDB, Redis, Docker, AWS EC2, Git, GitHub Actions
Testing & Tools: Playwright, E2E Testing, Postman, API Testing, CI/CD
AI Engineering: Claude Code, MCP Tooling, LangGraph, Agentic and Structured LLM Workflows, Context/Token Optimization

Education

Jain University May 2026
Bachelor of Computer Applications (BCA) – CGPA: 8.0/10 *Bengaluru, India*

Leadership & Activities

- **Event Supervisor – Techno-Fusion, Jain University:** Coordinated intercollegiate fest logistics for 300+ participants.
